

Document Number V0_20150609 (Tentative)

Product Specification LSUC 02R85C 3400F EA ST01

LSUC 02R85C 3400F EA ST01 LSUC 02R85C 3400F EA WT01 LSUC 02R85C 3400F EA LT01 LSUC 02R85C 3400F EA LT02 (Tentative)

■ Physical Properties

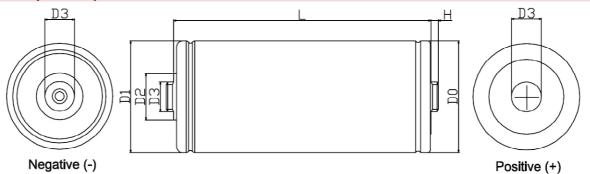

■ Specification

Rated Voltage	2.85 V				
Surge Voltage	3 V				
Capacitance Tolerance		0% / +20%			
Resistance Tolerance		< Spec. Value			
Operating temperature range		-40 ~ 65 °C			
Storage temperature range		-40 ~ 70 °C			
	1500 Hours				
Endurance Life (65 °C)	Capacitance change	Within 20% of initially specified value			
	Internal resistance change Within 100% of initially specified value				
	10 Years at rated voltage and +25 °C				
Life Time (25°C)	Capacitance change	Within 20% of initially specified value			
	Internal resistance change Within 100% of initially specified value				
	1,000,000 Cycles between rated voltage	e to half rated voltage at +25 °C			
Cycle Life (25°C)	Capacitance change	Within 20% of initially specified value			
	Internal resistance change Within 100% of initially specified value				
Shelf Life (25°C)	4 Years stored uncharged state at +25 °C				
Certifications	ROHS, REACH				
Shock & Vibration	IEC 61373, IEC 60068				

Part number	Capacitance (F)	DC ESR (mΩ)	Max. Current (A)	Leakage Current (mA)	Max. Stored Energy (Wh)	Weight (g)
LSUC 02R85C 3400F EA ST01	3400	0.26 (0.2 _Act. Data)	2,572	< 8	3.84	515
		Dimension (mm)				
	D0 (+ 0.6)	D1 (± 0.7)	D2 (±0.1)	D3	H (±0.1)	L (±0.5)
	Ø 60	Ø 60.7	Ø 25	M16, P1.0	4	138

Technical Information (1)

■ How to calculate specification value

1. The Measurement Methods

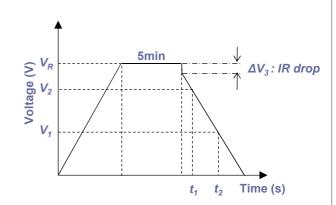

1-1 Capacitance

Apply rated voltage and charge for 5min after the constant current / constant voltage power supply has achieved the rated voltage. After a charge for 5min has finished, discharge with 10mA/F to 0.1V.

Measure the time t1 to t2 where the voltage between capacitor terminals at the time of discharge reduces from V1 to V2 as shown figure and calculate the capacitance value by the following formula:

$$C = \frac{Ix(t_2 - t_1)}{V_2 - V_1}$$

1-2 DC ESR (Equivalent Series Resistance)

DC ESR of a capacitor shall be calculated by the following formula;

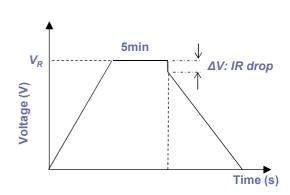

$$R_{DC} = \frac{\Delta V}{I_{DC}}$$

 R_{DC} is the DC internal resistance (Ω);

V is the effective value of AC voltage (V);

Where **ΔV** is the drop voltage for 10ms (V);

I_{DC} is the discharge current (A); 100A;

Technical Information (2)

1-3 Leakage Current

The leakage current shall be measured using the direct voltage appropriate to the test temperature (25 $^{\circ}$ C) for 72hrs.

1-4 Maximum current

Current for 1sec discharge from the rated voltage to the half of it in constant current discharge,

$$I_{Max} = \frac{V_R - 0.5^* V_R}{\triangle t / C + R_{DC}}$$

Where I_{Max} is the Maximum current (A);

△t is the discharge time (sec), 1 sec in this case;

c is the capacitance (F);

 R_{DC} is the DC resistance (Ω);

 V_R is the rated voltage (V).

1-5 Maximum stored energy (E_{MAX})

$$E_{MAX}(Wh) = \frac{\frac{1}{2} CV_R^2}{3600}$$

2. The Standard Atmospheric Condition for Measurement

All test and measurements shall be made under standard atmospheric conditions for testing. Before the measurements are made, the capacitor shall be stored at the measuring temperature for a time sufficient to allow the entire capacitor to reach this temperature. The period as prescribed for recovery at the end of a test is a normally sufficient for this purpose.

Temperature : $15\sim35$ °C Relative humidity : $25\sim75\%$ Air Pressure : $86\sim106$ kPa
